

Is YOUR Ride Ready For Summer?

Tires - Brakes - Alignments - Shocks/Struts - Diagnostics - Belts/Hoses - Inspections...

Air Conditioning Tips:

What is the best way to keep my vehicle's interior cold and save fuel?

Using recirculate or max air during high heat and high humidity will help your air conditioning system operate with less effort, will keep the inside of your vehicle cooler, and get better mileage.

What if your system is not blowing cold?

The most common cause is freon lose. If the system is low, we'll fill it with appropriate amount of freon and add dye. If the leak is too small to locate, which is very common, we'll ask you to drive the vehicle until it blows warm. Return to our facility for a quick inspection to locate the leak and we'll give you an estimate to repair. A small leak may take several months before losing enough freon to start blowing warm.

Air Conditioning Service Special

Save \$10.00

On any a/c related service. Expires 7/31/2009.

Save \$20.00

On service over 200.00

Save \$30.00
